

WEIRTON BOP IMPLOSION SITE

SAMPLING RESULTS | August 2020

The U.S. Environmental Protection Agency (EPA) has assessed the Weirton Basic Oxygen Plant (BOP) Implosion Site, located in Weirton, Hancock County, West Virginia. The assessment evaluated the impact that the March 9, 2019 implosion had on nearby properties. EPA collaborated with the West Virginia Department of Environmental Protection on this assessment.

In February 2020, EPA and its contractors sampled soils on properties located near the former BOP facility, primarily along Weir Avenue and Pennsylvania Avenue. Soil samples were taken from undeveloped and vacant properties where EPA suspected that the soil has remained undisturbed since the implosion. Soil samples were analyzed for heavy metals and asbestos.

Results of the assessment are available online at the following website:

<https://response.epa.gov/weirtonBOPimplosion>.

Results of the assessment show that a cleanup action is not required. There will be no further EPA action at this time. If you experience any issues accessing the results or have additional questions, please contact us using the information below.
